

## **Job Vacancy – Avalon Sciences Ltd**

### Job Title

Electronic Test Engineer

### Job Role

Working in a small team on electronic test, fault finding and repair of circuit boards designed and manufactured by ASL. Carrying out acceptance testing of new production equipment and service and repair of customer equipment you will be working closely with the design, production and customer service teams.

### Background

ASL is a world leader in the design and manufacture of downhole seismic recording systems, with a global customer base. We are a small and growing company working from modern well equipped premises in Somerton. Expansion has created the vacancy for an additional electronic test engineer.

### Characteristics

The successful candidate will have a methodical approach to their work, be self motivated, and a confident communicator.

Some foreign travel will be required.

### Experience and Knowledge

Experience in test, fault finding and repair of printed circuit boards including multi-layer and surface mount. PC literate for generation of reports etc.

### Qualifications

HNC/HND or equivalent in Electronics, Apprenticeship or equivalent in test and repair of electronic circuits.

### Remuneration

£Neg/hr for 37.5 hours week, plus overtime.

### Applications
